PROFILE

Informatics undergraduate specializing in Full-stack developer with hands-on experience in web application development, REST API development, and production system maintenance across frontend, backend, and database layers. Skilled in analysing operational requirements, translating them into technical solutions, and conducting root cause analysis to improve system reliability and data consistency. Experienced in functional testing, cross-functional collaboration, and communicating technical findings to stakeholders. Possesses a strong foundation in object-oriented programming (OOP), SOLID principles, and clean code practices, with a commitment to building maintainable software and continuously improving software engineering skills. Available February 2027

EDUCATION

Bachelor of Science in Informatics
Diponegoro University *2023 – 2027*
GPA: 3.55 / 4.00
Relevant Coursework: Database Management, Software Engineering, Software Project, Cloud Computing, Machine Learning, Information Systems, Internet of Things, Information Security & Assurance, Human-Computer Interaction

TECHNICAL SKILLS

Frontend Development: React.js, Next.js, HTML/CSS, Tailwind CSS, Web Design,
Backend & API: JavaScript, Node.js, Express.js, Python, PHP, Laravel, Go, REST API Design & Development
Database: PostgreSQL, MySQL, SQL Query Design
Tools & Workflow: Git, GitHub, Jira, Postman, Docker, Agile Development
Cloud & Infrastructure: AWS Cloud Fundamentals, Vercel, Cloud Computing
Software Engineering: OOP, SOLID Principles, Clean Code, Design Patterns, Debugging, Root Cause Analysis, API Documentation
Soft Skills: Analytical Thinking, Problem Solving, Team Collaboration, Communication, Adaptability, Continuous Learning

INTERNSHIP EXPERIENCE

Production Digitalization Intern
Kalbe Consumer Health *Aug 2026 – Jan 2027*

- Analysed manufacturing workflows and gathered requirements from users and stakeholders, translating operational needs into clear system specifications and development priorities.
- Developed a full-stack web-based monitoring system to digitalise internal manufacturing operations, covering frontend, backend, and database layers — including database schema design, backend component implementation, and integration with production data sources to consolidate operational information into a centralised platform.
- Conducted functional testing, performed root cause analysis, and implemented fixes for identified issues to align system behaviour with business rules and user requirements.
- Documented system functionality and development progress, communicating technical findings to stakeholders to maintain alignment between implementation and operational needs.

Tech Stack: React.js, Go (Fiber), PostgreSQL, Integration Worker, SCADA

Software Engineer Intern
SKENACORP *Jan 2026 – Mar 2026*

- Developed MediaLens, a backend-driven platform for automated news collection and NLP-based entity extraction, supporting scalable data ingestion, structured processing, and stakeholder-facing analytics.
- Designed and implemented backend data pipelines and database schemas to support concurrent article processing, organized data storage, and extensible multi-stage workflows.
- Integrated NLP-based Named Entity Recognition as a modular processing layer with clear data contracts and documented system behaviour to support maintainability and future extensibility.
- Developed a centralized analytics dashboard and REST-based reporting interface to transform processed backend data into structured, accessible insights for users and stakeholders.

Tech Stack: Python, React.js, MongoDB, NLP

Full Stack Developer Intern
PT Duta Solusi Informatika *Nov 2025 – Dec 2025*

- Developed and integrated backend modules and REST APIs for esikatERP, an enterprise inventory and compliance system, supporting operational data management and business process workflows.

- Built a web-based payroll and financial management system with backend calculation logic, data validation rules, and reporting features to support accurate multi-user workflows.
- Translated business requirements and operational workflows into backend and frontend implementations, ensuring system behaviour aligned with business logic and user needs.
- Produced technical documentation covering system architecture, API specifications, and usage guides to support team knowledge transfer and long-term maintenance.

Tech Stack: React.js, Laravel, PHP, JavaScript, MySQL

PROJECTS

Cuanselor — AI-Powered Personal Finance Planning Platform
Coding Camp by DBS Foundation — Capstone Project *Jul 2026*

- Developed the full-stack web application for an AI-driven personal finance platform targeting Gen Z, built to address low financial literacy and the lack of accessible retirement planning tools in Indonesia.
- Built the frontend using Next.js, React.js, TypeScript, and Tailwind CSS, delivering responsive UI components including a multi-step onboarding flow, user risk profiling interface, and interactive financial projection dashboards.
- Developed a REST API backend using Express.js integrated with Supabase (PostgreSQL) for data management, and connected the application with AI/ML model endpoints to deliver real-time retirement projections and personalised financial recommendations.
- Collaborated across a cross-functional team of AI Engineers, Data Scientists, and Full-Stack Developers, coordinating API contracts and system integration between the web application and machine learning models

Tech Stack: React.js, Python, REST API, AI/LLM integration

Shoes4Us — E-Commerce Platform
Academic Team Project *2025 – Present*

- Developed a full-stack e-commerce platform for footwear, apparel, and accessories, implementing product catalogues, shopping cart, payment processing.
- Designed and implemented a size-based inventory management system with granular per-variant stock tracking, enforcing atomic stock validation at both cart and checkout stages to prevent overselling
- Integrated Midtrans Snap payment processing and webhook-based order status synchronization to support payment handling and order lifecycle management
- Applied JWT-based authentication, Google OAuth 2.0, and role-based access control, while organizing backend logic using a layered REST API architecture.

Tech Stack: React.js, JavaScript, Tailwind CSS, Vercel

ORGANIZATIONAL & LEADERSHIP EXPERIENCE

Head of Logistics and Equipment Division — OLIMDIPO 2025 *May 2025 – Nov 2025*

- Led and coordinated the Logistics and Equipment Division for a university-level sports event with hundreds of student participants across multiple competition categories.
- Managed and coordinated more than 40 staff members to ensure logistics, equipment, and operational needs were met throughout the event.
- Designed a distribution and equipment management system throughout the event series, ensuring asset availability and readiness at all times.

Event Chairperson — LACESTRA 2024 *Oct 2024 – Dec 2024*

- Led the execution of an arts and awarding event, managing 6 committee divisions across the full event lifecycle from planning through post-event stages.
- Established strategic communication and collaboration with external parties, sponsors, and event partners to ensure the overall success of the event.

Staff, Arts and Sports Division — BEM Faculty of Science and Mathematics, UNDIP *Mar 2024 – Dec 2024*

- Coordinated 6 work programs and collaborated with 12 internal divisions and external stakeholders in designing and executing faculty-level events involving more than 500 students.

CERTIFICATIONS & PROGRAMS

- Coding Camp by DBS Foundation Bootcamp — Full Stack Development | Feb 2026 – Jul 2026
- Dicoding Certifications — Software Development / Web Development
- Oracle Academy — Project Management, Cloud Computing, and Database Management
